# RS-232 Serial Port Adapter for ANTARIS 4 Evaluation Kits
GPS.G4-EK-06002, Feb 24, 2006

1 Overview

The Serial Port Adapter provides a RS-232 compatible serial interface which allows in-lab use of Serial Port 1 EXTINT0 and TIMEPULSE. This is particularly useful to connect the AEK-4P / 4H / 4T Evaluation Kit to embedded host systems or to desktop computers.

This Serial Port Adapter shall be used when downloading new firmware into the ANTARIS 4 Evaluation Kits.

To connect it: Remove the top and rear cover and insert the Serial Board Adapter as illustrated on the right. The female DB9 connector faces to the rear side. After mounting, the top cover may be put on again.
